Our service provides a video pipe inspection and documentation of pipe two (2) inches or greater inside diameter pipe, and helps detect for problem areas due to some of the following problems: broken lines, offset joints, crushed lines, major low areas in the pipe, debris in the pipe and other visually identifiable objects, obstructions, or serious problems in the pipe interiors. Hydro Physics provides its' customers with an unbiased video pipe inspection. Our cameras are used to get a different perspective (i.e. the inside of the pipe) but neither the equipment or the operator of this equipment are to be used to make engineering, repair, or replacement decisions without consulting a licensed plumber or engineering professional. Hydro Physics services help give you information, which would otherwise be inaccessible, to assist you in your decision making process.

Hydro Physics will locate areas of interest and approximate depths will be given. Because of the possibility that electrical or atmospheric disturbance has effected our equipment, no guarantee is made of the exact locations, depths or position of any potential problem area, Excavation of such an area is done at your risk and should only be done after consultation with an excavation expert. We do guarantee that we will use our best effort and workmanlike manner to provide you with the information you have requested. Your sole remedy for any dissatisfaction with our service is a refund of the price you have paid to Hydro Physics. Hydro Physics shall not be liable for any consequential damages.
